

# Diagnostic Reference Index of Clinical Neurology

Diagnostic Reference Index of Clinical Neurology aims to give the busy clinician a fast, easy-to-use guide to the core neurological literature published from 1980 to 1986. This book is divided into two sections, key words and references. The keywords section consists of neuroscience terms and each main entry is followed by reference citation numbers and corresponding references. This index, unlike the usual computerized systems for literature retrieval, is structured around clinical problems and uses the approach and terminology of a practicing neurologist. The contents were sources from the full text of articles that were published in critical core of fourteen major international English-language journals in medicine and neurology. This book will be of interest to neurology students and to practicing clinical neurologists.
