

Experiments on the Metabolism of Matter and Energy in the Human Body - Primary Source Edition

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

Primary Source Edition Humans extract this energy from three classes of fuel molecules: Here we describe how the three main classes of nutrients are metabolized in human cells and the that these three classes of molecules are fuel sources for human metabolism, recognized that proteins, carbohydrates, and fats were oxidized in the body.
