

Challenges in Colorectal Cancer

Colorectal cancers are amongst the most common tumour types in the western world. In over 50% of cases the tumour spreads, and in most of these the survival time is between 6 and 12 months. An important new book in the field, *Challenges in Colorectal Cancer* focuses on the areas of controversy in the management of this disease and reviews the latest information on: * Epidemiology and prevention of colorectal cancer, including the application of molecular genetics, and the latest strategies for screening* Surgical management, including new laparoscopic and endoscopic techniques, and the role of the pathologist* Oncological management, including the role of radiotherapy, options for chemotherapy and new developments in vaccines and immunotherapy. *Challenges in Colorectal Cancer* provides an essential source of information for the gastrointestinal surgeon, gastroenterologist and oncologist.
