

Clinical Notes for the Frca

A concise and up-to-date text for the final FRCA examination, bridging the gap between enormous tomes and smaller books which do not cover the subject at FRCA level. Compiled from notes from Part III courses, the text covers all the main clinical aspects of the exam in greater detail placed on more topical and commonly examined subjects. It also contains relevant guidelines from the Royal Colleges, the Association of Anaesthetists and the American Association of Anesthetists, the conclusions from the National Confidential Enquiries into Perioperative and Maternal Deaths, these do not appear together in any other single publication. In addition, the text encompasses reviews from anaesthetic literature over the past five years - making it a useful reference for the trainee or the qualified anaesthetist. Features: * Pitched at the right level for FRCA candidates * Covers the main clinical aspects of the exam * Includes guidelines from a variety of authoritative sources * Compiled from Part III course notes and recent anathesia literature
