

Knowledge And Action

Understanding the relationship between knowledge and action is vital, because without knowledge there is often no action and because knowledge can strongly influence actions. However, there is often considerable inconsistency between knowledge and action, and the research available on this relationship is not widely known. This intriguing volume provides help by summarizing the findings of the research group Knowledge and Action, which was funded by the German Science Foundation and includes leading scholars from relevant areas such as social psychology, cognitive psychology, work and organizational psychology, educational psychology, and developmental psychology.
